

## Glacial Gloss for the Improvement of Photodamaged Skin

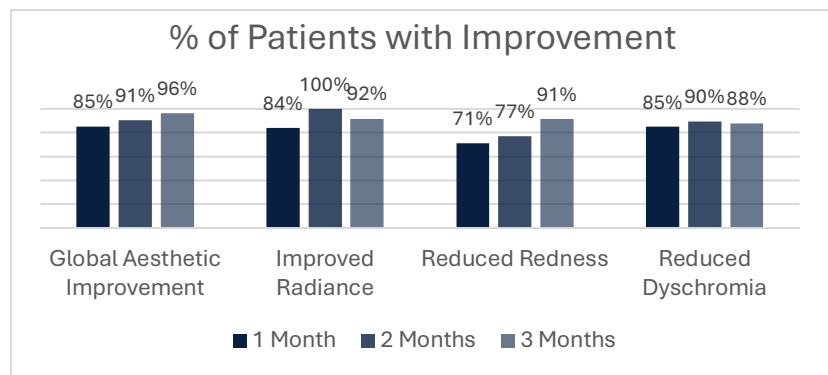

A prospective, multi-center clinical study to evaluate the Glacial® Rx System for the reduction of inflammation and improvement in appearance of photodamaged skin enrolled 38 subjects who received up to three Glacial Gloss treatments.

### RESULTS

- >95% of patients rated by investigator as having global cosmetic improvement at 3 months
- ~ 90% of patients reported improved skin brightness/radiance, reduced redness, and more even skin tone at 3 months
- 97% of patients indicated they would have the procedure again, and 100% would recommend the treatment to others
- 92% of patients found the procedure refreshing or relaxing
- No device-related adverse events

### CONCLUSIONS

Study data demonstrate the safety and effectiveness of the Glacial Gloss treatment in reducing inflammation, redness, and dyschromia and improving clarity and brightness in photodamaged skin, in a comfortable procedure with high patient satisfaction.
